Progress Report 2

Group members: Shasha Chen, Paulina Salas

Emails: shasha.chen@laverne.edu, paulina.salas@laverne.edu

Design decisions:

- Because our website is about a (fake) person's portfolio, the target audiences for our website are employers, clients, and other designers. Other users may include those people who like photography.

- The tools and technologies we will use are all of the techniques that we learned in class, including HTML, CSS, and JavaScript. We will use HTML to write the overall websites and use CSS to make them look professional. Then use JavaScript to design other things.

- The overall design is to make a professional portfolio website. We tend to make it simple and easy to use. The core features of this website include a resume, a list of services, a gallery, an about me section, skills and experience, and a contact me section.

- The website design satisfies the needs of our users because it's accessible for almost all users and it provides professional information about an individual or a company and presents a showcase of their work.

Current Status:

- We designed our website and shared ideas through google docs and email.

- We still have to combine our codes and finalize them.
