Final Project Proposal

Group Members: Shasha Chen, Paulina Salas

Emails: shasha.chen@laverne.edu, paulina.salas@laverne.edu

Problem Statement:

Portfolios are a great way to demonstrate skills and validate experience, which can be helpful for independent contractors, consultants, or business owners who need to provide work samples to potential clients. Creating portfolios is not only time consuming, but it can be difficult for those who have no experience in web design.

Work Plan:

Our plan for this project is to create a portfolio website for an imagined person who is a photographer. We will use a combination of HTML & Java to create the general layout of the portfolio template and implement CSS to make it aesthetically pleasing. This website will include four pages, home, about me, gallery, and contact me. The website will explain this person's photography skills and experience and excellent work.
